(54) Title: ANNOTATION OF DIGITAL IMAGES USING TEXT

(57) Abstract: Annotation of Digital Images Using TextA method for indexing the content information of a digital image for communication and retrieval purposes. A structured speech input is used to link the content information with field categories. The fields can be customized according to the need of the user. Using an automatic speech recognition engine the speech is transcribed and the content description extracted. The descriptions can then be stored in the fields as meta data describing the content of the corresponding image.
