

NAIL CORRECTING TOOL

ABSTRACT

The purpose of the present invention is to effectively correct highly deformed nails. This nail correcting tool (1) has a top surface (11) and a bottom surface (12), and the bottom surface (12) has a curved part (21) and a straight part (22). In a state in which the end of the curved part (21) is placed against the lateral edge of the nail, making the point of action to be said end, the fulcrum to be a point on the curved part away from said end, and the point of effort to be a point on the straight part, a force is applied to the point of effort and the lateral edge of the nail is thereby separated from the skin by the principle of leverage. In this way, the invention meets the aforementioned purpose.
