

METHOD FOR PRODUCING COMPOUND OR PHARMACEUTICALLY ACCEPTABLE SALT THEREOF

ABSTRACT

5

Provided is a technique for improving the productivity in a method for producing a compound I or a pharmaceutically acceptable salt thereof. This method for producing the compound I comprises: a step for preparing a compound 16 solution by deprotecting a compound 10-R₃ in a solvent; and a step for adding a compound 15 to the compound 16
10 solution without isolating the compound 16 and synthesizing the compound I in the presence of a condensing agent.
