(54) Title: MODULAR LIGHTING SYSTEM

Fig. 1

(57) Abstract: Disclosed is a lighting system (1) including a number of modules (2). The modules (2) includes a master module (2.1) and a number of slave modules (2.2). The modules (2) each include a mounting interface (3) for mounting on a wall or a ceiling, and a control unit (4). The control unit (4) is in each case configured to store a respective active lighting pattern. The modules (2) each further include a module communication interface and a plurality of lighting elements (6). The master module (2.1) is configured to generate a respective starting command for at least one module (2) and each module (2) is configured to autonomously execute the active lighting pattern of the respective module (2) in response to the respective starting command.
