

ABSTRACT

Provided in the present disclosure are information display methods, an apparatus, a device, a storage medium, and a product. A method comprises: in a first device, displaying on a first preset page a first object information set, which comprises first object information of preset objects in a preset object set, the preset object set being associated with a target live streaming video interface, and displaying target prompt information at a position adjacent to the first object information of a first target preset object, service data of the first target preset object satisfying a preset requirement, the target prompt information being used for giving a prompt to set the first target preset object as a preset object having a target object attribute, second object information of the preset object having the target object attribute comprising a target tag and being displayed at a target position, and the second object information set being displayed on a second preset page of a second device associated with the target live streaming video interface. Using the technical solution helps to improve the efficiency of setting target object attributes of preset objects.
