

Abstract

COMMUNICATION APPARATUS, COMMUNICATION SYSTEM, COMMUNICATION METHOD,
AND COMMUNICATION PROGRAM

A communication apparatus includes a
receiver configured to receive metadata of update
data for use in updating, a determination unit
5 configured to determine whether there are update data
subject to preliminary downloading indicating
downloading the update data in advance before an
update allowable time, based on a description of the
metadata, and an update process unit configured to
10 download the update data when the determination unit
determines that there are the update data subject to
preliminary downloading.
