

ABSTRACT

FRAGILE OBJECT PRESERVING DEVICE HAVING SEAL MECHANISM

5 An object of the present invention is to provide a
technique for preserving a shape of a fragile object in a
liquid. Provided is a device including a container that
houses a fragile object and has a cylindrical shape
including a bottom, a lid that seals the container, and a
10 seal. The container includes a lower portion that houses
the fragile object, an upper portion that includes an
opening, and a stepped portion provided between the lower
portion and the upper portion. The lid seals the opening
of the upper portion. The seal is interposed between the
15 lid and the stepped portion to seal an opening of the lower
portion.
