(54) Title: METHODS FOR MEASURING RATES OF RESERVE CHOLESTEROL TRANSPORT IN VIVO, AS AN INDEX OF
ANTI-ATHEROGENESIS

(57) Abstract: The present invention relates to biochemical methods for determining reverse cholesterol transport. Specifically, the
rates of the two arms of reverse cholesterol transport (HDL or first arm and post-HDL or second arm) are obtained by measuring the
flow of unlabeled cholesterol from tissues into plasma HDL and from plasma HDL to bile acids.
