

ABSTRACT

Technology related to independence support is improved. An independence support method to be executed by an information processing
5 apparatus includes determining a health care score of a subject, predicting a health status of the subject after a first predetermined period based on the health care score, predicting a health status of the subject after a second predetermined period based on a transition performance of a health status of a group to which the subject belongs, the group being determined by the health
10 care score, and presenting predictive information based on the health status after the first predetermined period and the health status after the second predetermined period.
