

ABSTRACT

The present application relates to the field of Artificial Intelligence (AI) technology and the field of cloud technology, and provides a song processing method and apparatus, an electronic device, and a computer readable storage medium. The method comprises: displaying a song recording interface in response to a singing instruction triggered on the basis of a conversation interface; performing song recording in response to a song recording instruction triggered on the basis of the song recording interface, and determining a reverb effect corresponding to the recorded song; in response to a song sending instruction, sending, by means of a conversation window, a target song obtained by processing the song on the basis of the reverb effect, displaying a conversation message corresponding to the target song in the conversation interface, and displaying a segueing function item corresponding to the target song, wherein the segueing function item is used for a conversation member in the conversation window to segue to the target song.
