

HOLDER, FILTRATION SYSTEM, AND FILTRATION TREATMENT

APPARATUS

ABSTRACT

A holder for holding a plurality of filtration membrane units in a mode of being arranged in a thickness direction of each of the respective filtration membranes by a water collection cassette 41 that holds each of ends on one side in a longitudinal direction of the plurality of filtration membrane units and a blind cassette that holds each of ends on another side in the longitudinal direction of the filtration membrane units, in which in a region surrounded by an outer edge of a cross section of the water collection cassette 41 along a direction orthogonal to a facing direction between the water collection cassette 41 and the plurality of filtration membrane units held by the water collection cassette, a plurality of through openings (101 to 112) penetrating the water collection cassette 41 along the facing direction is arranged in a region facing the plurality of filtration membrane units along the facing direction.
