

ABSTRACT

It is an object of the invention to provide a tank for use in making high-quality, air void-less, polishing pads, to provide a method for producing a polishing pad using the tank, and to provide a polishing pad obtained by such a production method. A tank for holding a resin composition, the tank comprising two or more body components and joint parts, wherein the two or more body components are joined by the joint parts to form a frame-shaped body, at least one of the joint parts includes an opening and closing member that joins adjacent ones of the body components in such a way that the adjacent body components can swing open, and at least another one of the joint parts includes a joint member that joins adjacent ones of the body components in such a way that the adjacent body components can swing about the joint member.
