

## ABSTRACT

## MANAGEMENT APPARATUS AND MANAGEMENT METHOD

A management method for managing a CO<sub>2</sub> emission amount to be emitted by producing a product, includes: reading out a first CO<sub>2</sub> emission amount that is a CO<sub>2</sub> emission amount per unit weight of a first raw material and a second CO<sub>2</sub> emission amount that is a CO<sub>2</sub> emission amount per unit weight of a second raw material; and calculating the CO<sub>2</sub> emission amount of the product based on a CO<sub>2</sub> emission amount to be calculated from the first CO<sub>2</sub> emission amount and from a weight of the first raw material used to produce the product, and a CO<sub>2</sub> emission amount to be calculated from the second CO<sub>2</sub> emission amount and from a weight of the second raw material used to produce the product.
