(54) Title: RECORDING METHODS AND DEVICES FOR RECORDING INFORMATION ON DUAL LAYER RECORDABLE
DISKS

(57) Abstract: The invention relates to recording methods for recording information on a dual layer recordable disk, and to corre-
sponding recording devices. In one such method and recording device the OPC-area is variably located on a layer of the disk. In
a preferred embodiment the OPC-area is located relative close to the radius where the data stream switches from the first layer to
the second layer. This reduced additional time required for jumping to a fixed OPC-area. Furthermore, in another such method and
device the information to be recorded is equally divided over both layers of the dual layer disc. This avoids additional time required
for finalization.
