

ABSTRACT

A PDU POWER DISTRIBUTION APPARATUS

The present application relates to a PDU power distribution apparatus, comprising a housing, the housing is provided with a conductor assembly facing a bottom of the housing, a fixing element is provided between the conductor assembly and the housing for fixing the conductor assembly, a protecting seat is provided inside the housing for protecting the conductor assembly, and the protective seat is provided with a through hole for inserting and connecting a power adapter, a pre-installed seat is provided inside the housing for installing the power adapter, and the pre-installed seat is located on a side of the protecting seat departing from the conductor assembly, the pre-installed seat is provided with a socket for inserting and connecting the power adapter on a side facing the conductor assembly, and the pre-installed seat is connected to the housing. The present application has an effect of improving a safety of using the power distribution apparatus.
