

ABSTRACT

AN APPARATUS ADAPTABLY USABLE IN A SYSTEM AND A CONFIGURATION METHOD ASSOCIATED THEREWITH

An apparatus which can be suitably adapted for use in a system which can be associated with a plurality of operations. Each of the plurality of operations can be associated with at least one device which can be coupled to the apparatus. The apparatus can be adaptably used in the system in a manner such that the apparatus is configurable as any one of a slave device, a master device and a power supply device, or any combination thereof, relative to the device(s).
