(54) Title: METHOD AND APPARATUS FOR PEER TO PEER STREAMING

FIGURE 4.

(57) Abstract: In accordance with an example embodiment of the present invention, An apparatus, comprising a processor configured to assign at least one of a plurality of real time transport protocol data units to at least one of at least two peer to peer partial real-time transport protocol streaming sessions, based at least in part on at least one timestamp associated with the at least one of the plurality of real time protocol data units. The plurality of real time transport protocol data units, is associated with the real time transport protocol media stream.
