

Abstract

Applicator (1) for applying a nail brace (23) provided with a brace magnet
element (24) to a nail (26) of a toe or finger to be corrected, having an
5 elongated base body (2), which extends in a base body longitudinal direc-
tion (x), a base body width direction (y) and a base body depth direction (z)
and has a first base body end face (3) oriented perpendicular to the base
body longitudinal direction (x), which forms an application region, and an
applicator magnet element (25) arranged in the application region for inter-
10 action with the brace magnet element (24) and for thereby releasably hold-
ing the nail brace (23) to be applied in the application region, wherein the
application region has two support surfaces (4) for supporting the nail
brace (23) to be applied and a concave pressing recess (5) arranged be-
tween the two support surfaces (4).
