

ABSTRACT

MODULAR SAFE DEPOSIT BOX ASSEMBLY

A safety deposit box storage structure (10) comprising: a housing (12) formed from continuous metal sheet, the housing having a back wall (22) and spaced apart side walls (24, 26). At least one inwardly projecting ridge (34) extends along the inner surface of each side wall. A top wall (60) and a bottom wall (70) are secured to the housing to form a box structure having an open front end. At least one vertical partition (80, 82) is disposed between and parallel to the side walls; the vertical partition being generally flat, and having at least one corrugation (86) formed therein. Each corrugation has a ridge (88) projecting from each side of the partition. A plurality of spaced-apart slots (90) are formed in the ridges. The slots are generally parallel to the top and bottom wall. A plurality of horizontal shelves (100, 102, 104) are provided having lateral edges dimensioned to be received in the slots, the vertical partitions and horizontal shelves defining compartments within the box structure to receive a security box. A door frame (14) is fixedly connectable to the open front end of the housing. The door frame includes a plurality of lockable doors (220) equal in number to the number of compartments defined within the housing.
