(54) Title: TUBULAR HANDLING SYSTEM

FIG. 1

(57) Abstract: A horizontal pipe handling system that can include a base with a center longitudinal axis, an intermediate storage location comprising a cradle configured to support a first tubular in a horizontal orientation, a first horizontal pipe handler with a first feeder arm rotatably attached to the base at a first axis on a first side of the center longitudinal axis, wherein the first feeder arm extends from the first axis, past the cradle, and to a second side of the center longitudinal axis, and a second horizontal pipe handler with a first ramp arm rotatably attached to the base at a second axis which is disposed on the second side of the center longitudinal axis, wherein the first ramp arm is configured to support one or more tubulars in the horizontal orientation which is substantially parallel to the center longitudinal axis.
