

LIVING BODY COLLATING DEVICE, LIVING BODY
COLLATING SYSTEM, LIVING BODY COLLATING METHOD AND
REGISTRATION DATA RENEWING METHOD

ABSTRACT OF THE DISCLOSURE

There are provided a living body collating device, a living body collating system and a living body collating method, which is equipped with optimization candidate data extracting means 35 for extracting optimization candidate data for data renewal from past record data of living body information achieved, optimization candidate data storage means 36 for storing the optimization candidate data extracted by the optimization candidate data extracting means 35, and renewal storage means 37 for storing, as new registration data, the data having higher priorities of the optimization candidate data stored in the optimization candidate data storage means 36 and registration data stored in registration data storage means.
