(54) Title: SIGNALING OF SLICE AND TILE PICTURE PARTITIONS

2900

performing a conversion between a video
comprising a video picture comprising a video
tile including one or more slices and a bitstream
of the video according to a rule specifying that a
second slice in a tile that includes a first slice in a
picture has a height that is represented in a unit
of coding tree units, where the first slice has a
first slice index, the second slice has a second
slice index that is determined based on the first
slice index and a number of explicitly provided
slice heights in the video tile, and the height of
the second slice is determined based on the first
slice index and the second slice index

2910

FIG. 29

(57) Abstract: Techniques for video processing, including video coding, video decoding and video transcoding are described. One example method includes performing a conversion between a video comprising a video picture comprising a video tile including one or more slices and a bitstream of the video according to a rule. The rule specifies that a second slice in a tile that includes a first slice in a picture has a height that is represented in a unit of coding tree units. The first slice has a first slice index, and the second slice has a second slice index that is determined based on the first slice index and a number of explicitly provided slice heights in the video tile. The height of the second slice is determined based on the first slice index and the second slice index.
