

SYSTEM, DEVICE, AND METHOD

ABSTRACT

5 A system 30 for displaying the state of a plant 1 is provided with: a first display
function 42 for displaying an abnormality display indicating the occurrence of an abnormality
having the possibility of stopping the plant 1, and prompting an operator for confirmation; a
second display function 44 for, if the abnormality display is selected by the operator using the
first display function 42, displaying image information R21 indicating the positions of tubes in
10 the entire plant, and the positions of sensors provided in the tubes, and for using a prescribed
form to represent an abnormal state of a tube, detected by a sensor; and a third display function
46 for displaying data relating to the sensor serving as the basis of the abnormal state
represented using the prescribed form.
