(54) Title: LATERAL CASE FOR MOTORCYCLES WITH IMPROVED COUPLING DEVICE TO THE VEHICLE FRAME

Fig. 3

(57) Abstract: The present invention relates to a lateral case for motorcycles provided with an improved coupling/release device for the coupling and release of the case itself to/from the vehicle frame. The lateral case for motorcycles according to the present invention is configured to allow the user to perform the coupling and release operations with a single and simple vertical movement of the bag with respect to the motorcycle frame, so that the coupling/release operation is simpler and more convenient for the user. Furthermore, the coupling/release device of the lateral case according to the present invention is easy for the user to activate and has a high degree of security towards accidental or fraudulent openings.
