

APPARATUS, AND ASSOCIATED METHOD, FOR FACILITATING DELIVERY AND PROCESSING OF PUSH CONTENT

ABSTRACT

Apparatus, and an associated method, for facilitating delivery and processing of asynchronous push content communicated to a mobile station of a radio communication system. Replace outdated and background processing attributes are defined and operated upon the communicated content. Use of the replace outdated attribute avoids display of other than most-recent content, and use of the background processing attribute permits operations to be performed upon the push content, even when an application with which the push content is associated, is not active.
