(54) Title: SYSTEMS AND METHODS FOR OPERATING AN AMUSEMENT PARK SYSTEM

FIG. 1

(57) Abstract: A controller for an amusement park attraction system includes processing circuitry and memory with instructions that, when executed by the processing circuitry, are configured to cause the processing circuitry to operate the amusement park attraction system in a primary mode, receive a plurality of operating parameter values of the amusement park attraction system during operation of the amusement park attraction system in the primary mode, compare the plurality of operating parameter values to respective, corresponding threshold ranges of values, determine an operating parameter value of the plurality of operating parameter values is outside of a corresponding threshold range of values in the primary mode, and transition operation of the amusement park attraction system from the primary mode to a secondary mode in response to determining the operating parameter value is outside of the corresponding threshold range of values in the primary mode.
