Abstract

Example embodiments relate generally to a product indexing systems and methods. The method may include receiving product data of a product. The product data may include at least an image. The image may include a product image of the product and a context image. The context image may provide the context that the product is in. The context image may include at least one non-product image. The method may further include identifying the product image. The method may further include identifying the context image from the image. The method may further include verifying the product in the product image based on the context image. The method may further include extracting the product image. The method may further include indexing the product image. The method may further include orientating the product image to match a pre-defined viewpoint of the product image.
