

ABSTRACT OF THE INVENTION

LATCH TYPE LOCK

5 A latch type lock which includes a latch, a main
lock body, an auxiliary lock body and a stop block. The
stop block is formed with a horizontal passage for the
latch to be inserted therein and provided with screw
holes and positioning insert plates for assembling the
10 stop block on the main lock body or on the auxiliary lock
body and further bored with other screw holes for screws
to be inserted therein to secure the stop block on a
movable door jamb. The stop block can optionally be
assembled either on the main lock body or on the
15 auxiliary lock body so that the whole lock can be
installed according to an actual installation situation
and space, flexible and optional in installation and
having extensive applicability.
