

METHOD FOR PROVIDING INFORMATION

ABSTRACT

In a method for providing information, menu items included in menu information regarding a second restaurant indicated by a store ID are arranged in order according to
5 taste information regarding a user on the basis of the taste information and the menu information, the menu information being obtained, over a network before the store ID is obtained from a terminal apparatus, from a server associated with the second restaurant indicated by the store ID. Menu information regarding the menu items arranged in the
10 order is transmitted to the terminal apparatus and displayed on a display screen of the terminal apparatus.
