

ABSTRACT

BIOCHEMICAL HAZARD DETECTION SYSTEM AND METHOD

5 A system and method for detecting a biological hazard are disclosed the
method comprising the steps of mounting a biochemical detection system
connected to a communication system in a plurality of vehicles. The biochemical
detection system consists of a biochemical sensor, a microcontroller and a battery
10 pack. The method further comprising monitoring the biochemical detection
system in the plurality of vehicles from a control room via the communication
system. A warning is provided if a least one of said biochemical detection
systems in the plurality of vehicles detects a biological hazard
