

ABSTRACT**Railway vehicle car with holographic windows**

The present invention relates to a railway vehicle car (10), comprising:

- a body (12) comprising walls (14) defining an inner compartment (16); and
- at least one glass pane (22), each glass pane (22) being received in an opening (20) defined in the walls (14), each glass pane (22) comprising an inner face (23) and an outer face (25).

The car (10) comprises at least one projection system (26) located in the compartment (16) and configured to project images toward the glass pane (22), the glass pane (22) comprising:

- a holographic film arranged to display the images projected by the projection system (26); and
- a semi-reflective film having, for any wavelength of the visible spectrum, a reflection rate of the light in normal incidence of between 20% and 70%.
