

## Abstract

The present disclosure concerns a method of treating a disease or condition associated with branched-chain ketoacid dehydrogenase kinase (BDK) in a subject in need thereof, comprising administering a therapeutically effective amount of a compound of Formula (I) or a pharmaceutically acceptable salt, solvate or prodrug thereof:

wherein  $R_1$  is selected from optionally substituted alkyl, optionally substituted alkoxy, optionally substituted cycloalkyl, aryl optionally substituted with alkyl, alkenyl, halogen, oxo, alkoxy or acyloxy; and  $R_2$  is selected from H, optionally substituted alkyl or optionally substituted aryl;  $R_3$  is selected from halo, oxo, nitro, optionally substituted alkyl, optionally substituted alkoxy, optionally substituted amino;  $X_1$  is selected from O or S;  $X_2$  is halo; and  $n$  is an integer selected from 0 to 3.
