RESOURCE TRANSFER VERIFICATION METHOD AND APPARATUS, AND ELECTRONIC PAYMENT VERIFICATION METHOD AND APPARATUS

ABSTRACT

The present specification discloses a resource transfer verification method and apparatus, and an electronic payment verification method and apparatus. The method includes: receiving a resource transfer request that is sent by a resource transferor and that is used for requesting transfer of resources of the resource transferor to a resource transferee, further determining verification information used for indicating that the transfer succeeds after resources of the resource transferor are transferred to the resource transferee according to the resource transfer request, and transmitting a resource transfer result including the verification information to the resource transferor, so that the resource transferee can accurately determine, according to the verification information, whether the transfer is completed when the resource transferor shows the resource transferee the resource transfer result, thereby effectively avoiding the omission of the resource transfer.
