(54) Title: MAGNETIC BOTTLE SYSTEM AND METHODS OF USE

FIG. 1

(57) Abstract: According to an aspect of some embodiments of the present invention there is provided a bottle mount system which uses an at least partially open-faced, magnetic mount to effectuate easier removal and insertion of a bottle. In some embodiments of the invention, the bottle is fitted with a magnetically active ring which magnetically interacts with the mount. In an embodiment of the invention, the mount is comprised of a neck with arms which are shorter than arms provided to a base, thereby creating a funnel-like shape with the more open end towards the top of the mount for focusing insertion of the bottle and allowing for removal of the bottle along multiple axes and directions.
