

【Abstract】

METHOD FOR ACCESSING REMOTE SERVER AND SYSTEM THEREOF

5 The present disclosure relates to a remote server
access method performed by a client, the method including
transmitting, to an application server of a service
network, a message for requesting an access to a target
server of a target network; receiving, from the application
10 server, one or more token information for accessing the
target server; generating multiple tunnels between the
client and a bastion server of the target network based on
the one or more token information; and accessing the target
server in the target network using the generated multiple
15 tunnels.
