(54) Title: URINE COLLECTION DEVICE

(57) Abstract: A urine collection device comprises a collection means (102) to collect urine voided by a user, first and second outlet means (103, 108) adapted to allow urine collected by the collection means (102) to drain from the device and a transfer passage (111) adapted to transfer urine collected by the collection means (102) to a receptacle (110). The first outlet means (103) includes a flow rate variation device (106) so constructed and arranged that an initial drain flow rate through the variation device is greater than a second drain flow rate through the variation device; and the second outlet means (108) comprises an overflow outlet means (118) adapted to allow urine collected by the collection means (102) to drain from the urine collection device at a third drain flow rate equal to or higher than the initial drain flow rate through the variation device.
