

ABSTRACT

Title of Invention: AIR COMPOSITION ADJUSTING DEVICE

An air composition adjusting device includes: an oxygen separator (41) that separates oxygen from external air to be supplied to a target space (5); a gas supply path (135) including a high concentration gas supply path (136) for oxygen through which the oxygen separator (41) communicates with the target space (5); and a controller (110) that performs an oxygen concentration raising operation of supplying a high oxygen concentration gas, which has a higher oxygen concentration than external air before being treated by the oxygen separator (41), to the target space (5) through the high concentration gas supply path (136) for oxygen.
