

RULE MINING METHOD AND APPARATUS

ABSTRACT

Embodiments of this specification provide a rule mining method and apparatus. The rule mining method includes: obtaining service data, and selecting a numerical computable column associated
5 with a target service scenario from the service data; constructing a plurality of graph nodes based on a computation operator and the numerical computable column; inputting the plurality of graph nodes to a rule prediction model, and processing the plurality of graph nodes through a fusion unit and a link prediction unit in the rule prediction model, to obtain a graph node link relationship; and
10 generating a numerical column computation rule corresponding to the target service scenario based on the graph node link relationship.
