

LIGHTING DEVICE HAVING UNINTERRUPTIBLE ILLUMINATION AND EXTERNAL POWER SUPPLY FUNCTION

ABSTRACT

5 The present invention provides a lighting device having
uninterruptible illumination and external power supply function, in which
the lighting device is combined with an energy storing/discharging device
thereby providing an uninterruptible illumination function and supplying
uninterruptable AC or DC power to the exterior during power blackout, a
10 controller assembly is integrated with an operation device, an external
power supply interface device, an electric-driven lighting device, a public
power and/or solar power and/or wind power generation source, and an
energy storing/discharging device, thereby capable of providing the
uninterruptible illumination function and supplying uninterruptable AC or
15 DC power to the exterior during power blackout.
