

PYRIDAZINONE PARP INHIBITOR, AND PREPARATION METHOD THEREFOR, AND PHARMACEUTICAL COMPOSITION AND USE THEREOF

ABSTRACT

5

A pyridazinone compound as shown in formula (I), and a preparation method therefor, and a pharmaceutical composition and the use thereof. The compound, as a PARP inhibitor, has potential advantages in terms of blood-brain barrier permeability, achieves inhibitory activity on PARP enzymes at a nanomolar concentration level, and can be used in the preparation of a drug
10 for preventing or/and treating stroke; in addition, the method for preparing the PARP inhibitor is simple and easy.
