

INTERLOCKABLE PARTITION PANEL AND METHOD OF FABRICATION THE SAME**ABSTRACT OF THE DISCLOSURE**

An interlockable partition panel wall substantially rectangular for office plan or residential
5 rooms, and the like is disclosed. The panel wall comprises

a plurality of panels having protruded edge formed along the edges of the longer side of the
panel defining a channel therebetween adapted to house cables and the like therein, and
having a plurality of gap holes spaced apart along the lateral edge of the panel;

a first locking mechanism mounted at the gap holes; and

10 a second locking mechanism inserted into the first locking mechanism so that the panels are
alignedly mounted and securedly formed as a partition wall.
