

ABSTRACT

SHUT-OFF DEVICE FOR PIPE

5 A shut-off device (10) for pipe for use in a pipeline for
operation in response to ingress of water, has a valve
(100) for installation in a pipe of said pipeline. The
valve (100) has a valve member (110) supported for
movement between an open position when the valve (100) is
10 open to permit passage through the pipe and a closed
position when the valve (100) is closed to shut off
passage through the pipe. Included is a buoyant member
(200) associated with the valve member (110) for moving
the valve member (110) to the closed position
15 automatically in the presence of ingress water in the
vicinity of the buoyant member (200).
