

ABSTRACT

A thermal formed tray (10) includes a side part (11), a bottom part (20) connected to the side part (11), and a flange part (30) provided around the side part (11). The bottom part (20) has bottom part deformation accelerating means (25) for accelerating deformation of the bottom part (20) when pressure inside the thermal formed tray (10) is reduced. The side part (11) has side part deformation preventing means (12) for preventing deformation of the side part (11) when the pressure inside the thermal formed tray (10) is reduced.
