performing a conversion between a video having one or more chroma components, the video comprising one or more video pictures comprising one or more slices and a coded representation of the video

3002

FIG. 3

(57) Abstract: Systems, methods and apparatus for video processing are described. The video processing may include video encoding, video decoding or video transcoding. One example method of video processing includes performing a conversion between a video comprising one or more video regions and a bitstream of the video according to a format rule, wherein the format rule specifies that a variable X indicates whether B slice is allowed or used in a video region, and wherein the format rule further specifies that the variable X is based on values of a reference picture list information present flag and/or a field indicating a number of entries in a reference picture list syntax structure.
