(54) Title: TABLE AND SEATING APPARATUS

FIG. 1

(57) Abstract: A rolling table and seating system includes a first assembly folding between a first position with the first assembly forming a seat bottom, and a second storage position. A second assembly moves between a first position with the second assembly forming a table and a second position at which the second assembly forms a seat back complementary to the seat bottom. A frame has laterally spaced apart first and second upright frame portions, the first upright frame portion supporting the first assembly and the second upright frame portion supporting the second assembly. A lower frame portion extends laterally outward including a first lateral portion extending toward a first side beyond the first upright frame portion, and a second lateral portion extending toward a second side beyond the second upright frame portion. First linkages fold the first assembly and include a leg supporting the seat bottom at the first position, and lift and pivot the leg at the second storage position. Second linkages fold the second assembly and include a leg supporting the table at the first position and move the leg to a position with a lower end of the leg laterally outward from an upper end of the leg.
