

**METHOD AND SYSTEM FOR LOCATION MANAGEMENT AND LOCATION
INFORMATION PROVIDING SYSTEM**

ABSTRACT

In an information providing system, a user inputs desired mobile ID number to a client
5 terminal. The client terminal transmits a request for location information on the
mobile station including the mobile ID number to a location server via a location
information server. The location server transmits a request for object movement
information corresponding to the mobile station to an object information server. The
location information server obtains the information from a traffic control device.
10 Location information on the mobile station obtained by the location information
server is transmitted to the terminal.
