(54) **Title:** CLOTHES DRYING RACK

(57) **Abstract:** The invention relates to a clothes drying rack that is able to be deployed between a retracted position inside a construction such as an apartment, and a deployed position in which it holds clothes out to dry outside of the construction. The clothes drying rack includes a mounting arrangement for mounting the rack to a construction (preferably an outer wall), a clothes drying arrangement or clothes line, as well as a supporting arrangement that allows the clothes line to be moved to a deployed position in a sliding fashion, and also allows the clothes drying arrangement to be moved between an upper position in which it aligns with the window to allow the clothes drying arrangement to be brought into the window, and a lower position in which the clothes drying arrangement is located below the lower edge of a window, allowing the window to be closed.
