ABSTRACT

The present invention provides an aqueous suspension pharmaceutical preparation with a pH of 2.5 - 5.5, comprising the following (1) to (4):

(1) (3aR,4S,7R,7aS)-2-{(1R,2R)-2-[4-(1,2-benzisothiazol-3-yl)piperazin-1-ylmethyl]cyclohexylmethyl}hexahydro-4,7-methano-2H-isoindole-1,3-dione (Compound 1), a pharmaceutically acceptable acid addition salt thereof, or a mixture thereof,

(2) one or more chlorides selected from an inorganic chloride or a quaternary ammonium chloride having 4 to 12 carbon atoms,

(3) a dispersant, and

(4) water,

which exhibits the solubility in the stomach depending on the property of a drug without producing rapid dissolution and absorption even when the preparation is administered orally and can inhibit the particle growth and the aggregation of particles.
