

**Process for the continuous preparation of rubber powders
and a device for carrying out the process**

Abstract

Process for the continuous preparation of filler-containing
5 rubber powders, wherein a filler suspension and rubber
latex are mixed in the liquid phase. The liquid mixture is
passed through a tube, at least a coagulant is added to the
tube and filler-containing rubber particles are
precipitated. The liquid mixture is passed through at least
10 one throttle point of variable throttle cross-section
provided in the tube. The throttle cross-section is
adjusted with the proviso that the drop in pressure in the
liquid mixture achieved with the throttle point is greater
than 0.5 bar.
