

ROOFING MATERIAL AND ROOF STRUCTURE

ABSTRACT

- 5 The present invention relates to roofing material (100) to be connected with a further roofing material under a condition that respective sides of the roofing material and the further roofing material are overlapped with each other, including a main body (1) having a substantially flat plate shape and a fitting part (5) formed at an end of the main body (1). The roofing material (100) further includes at least one positioning marker (3) which is provided to the fitting part (5) so as to indicate a position of an overlap between the respective sides
